

## Broadcast Anywhere Timeline TV

### OB6

OB6 is an HD, medium size, single expanding unit that can cater for 12 cabled cameras along with multiple radio cameras. Uniquely, the unit also features an integrated 1.8m Ku band, fully redundant satellite uplink chain. This enables the truck to provide both comprehensive production facilities as well as multiple satellite uplink paths within one vehicle - reducing costs and space needed on site. The unit is ideal for city centre working, music and events coverage, news broadcasts and sports events.

# OB6

## Vehicle
